**TRANSMITTING ENERGY, LEADING QUALITY.**

## ABOUT US

Conduspar, a Brazilian company that completes 30 years of market in 2016, is practically present in all market segments, with a wide range of power and telecommunication cables.

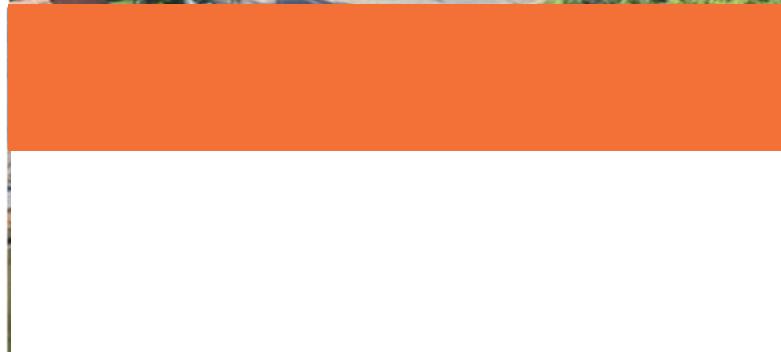

With a production area of more than 100,000 m<sup>2</sup>, the company is located in São José dos Pinhais, in the state of Paraná, and has a logistics structure to serve the entire Brazilian and Latin American market. Its strategic location allows fast flow of products through the main roads of the country and the port of Paranaguá.

For us, the excellence in logistics and the commitment to the attention to the expectations of the clients represent a great strategic advantage.

**1986**

In May 1986, takes place the foundation of Conduspar, specialized in the manufacturing of electric conductors.

Established initially in Curitiba, PR, in an area with about 1,300 m<sup>2</sup>, at the time, the factory processed 12 tons of copper per month.

## OUR SOLUTIONS

Conduspar has one of the largest productive capacities in Brazil. Our wide variety of products and the possibility of attending to the different specifications of customers make us one of the most complete suppliers of power and telecommunication cables in South America.

Our product line includes from bare cables for transmission lines to insulated cables for underground networks with voltages up to 69 kV. We still have an extensive line of optical cables, through our joint venture Sterlite Conduspar.

The goal in Product Engineering and Development puts us in the forefront. If there is a requirement for a power or optical cable, there is a Conduspar cable that satisfies it!

## OUR MARKET

The projects of energy generation and transmission count on the reliability of the lines of Conduspar products.

Substations, transmission lines and the entire hydroelectric, thermoelectric and renewable energy matrix in Brazil already enjoy Conduspar cables. The company serves energy distribution dealers in virtually all of their power cable needs. At another point, consumers can have the strictest quality control and security for their installation.

Industry and its infrastructure move the countries' economy. Our production capacity and the possibility of product customization add value to our partners, which makes their production line more efficient, reliable and reaching more and more markets.

Large telecom operators already have our optical cables in their backbone structure and long distance data transmission. More than energy, Conduspar drives communication and entertainment to millions of people.

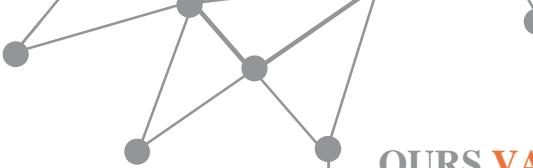

### MISSION

To guarantee to our clients solutions in conductors with contribution to the development.

### VISION

To be the reference among the best companies in the conductor segment.

## OURS VALUES

Each one of us is committed - with Conduspar, with society and with itself - for the quality of our efforts, assuming the responsibility of developing our corporate culture and sharing our VALUES.

### INTEGRITY

We will do what is right and not just what is necessary. We act ethically and justly in honoring our commitments. We are individually and collectively responsible for everything that happens to us. Truth and transparency prevail in all situations. We respect life in all its forms, manifestations and situations. We guarantee principles of respect for differences, non-discrimination and equal opportunities. We strive for the total absence of protectionism and privileges.

### EXCELLENCE

We act with professionalism and focus on results, inspiring reliability to our brand. We are optimistic and entrepreneurs by nature, confident of the possibility of doing better. We set the highest standard of reference for everything we do, and pursue truly challenging goals. We cultivate the improvement and we look tirelessly for solutions that contribute to the reach of our objectives. The incessant quest for excellence is what drives us to be the benchmark in our segment.

### COLLECTIVITY

We are convinced that no one makes great achievements only with good ideas. We work better with the coordinated effort, sharing visions and multiplying our strengths. We value individual excellence, but we strive for teamwork and collective achievement. We are responsible for the development of our peers, convinced that their weaknesses are ours. We create a lot of space for opinion and no dissent. We are a team!

### INNOVATION

We inspire and create positive changes around us motivated by the spirit of innovation. We challenge conventional wisdom, challenge our assumptions, and create new opportunities. We value the creativity and perseverance of searching incessantly for the best result. We transform new ideas into reality to better serve our clients, and we act with enthusiasm before the challenges.

### DEVELOPMENT

The people and their talents are the competitive difference of Conduspar. We focus on the integral evolution of the human being by generating opportunities through training and alignment of purposes. We encourage continuous development to build an environment conducive to learning. Humility and simplicity characterize our actions and decisions towards evolution. We believe in education as a source of transformation and sustainable development.

## PRODUCT INDEX

### INSULATED CONDUCTORS

Flexpar Cable BWF 750 V  
Toxfree Cable 750 V  
Rigid Cable BWF 750 V  
Wire BWF 750 V

### CORDS

Parallel 300 V  
PP 500 V  
Welding Cable 750 V

### LOW VOLTAGE ENERGY

Flex Cable HEP 1 kV  
Toxfree Cable 1 kV  
Rigid Cable HEP 1 kV  
Flex Cable PVC 1 kV  
XLPE Cable 1 kV

### SPECIAL APPLICATIONS

Control Cable  
Shielded Control Cable  
Cable for Frequency Converter 1 kV  
Instrumentation Cable BC  
Instrumentation Cable BIC

### UNDERGROUND MEDIUM VOLTAGE

Cable MTS105  
Cable MTX  
Cable MT105  
Cable MTS Toxfree

### BARE CABLES

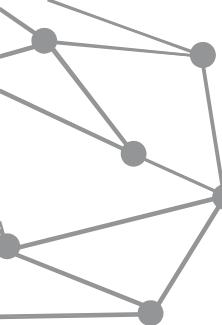

Cooper  
Aluminum CA  
Aluminum with Steel Core CAA

### OVERHEAD LINES

Cable Multiplex 1 kV  
Protected Cable  
Cable MTX-RA 15 kV

### SPECIAL LINES

Cable PROSOLAR FV  
Cable MTX Grid 35 kV  
Cable MTS105 Grid 35 kV  
Aluminum Cable with Core in Composite ACCC

**INSULATED CONDUCTORS**

# Flexpar Cable BWF 750 V

## Application

The Conduspar Line of Flexpar Cables BWF 750 V is suitable for common electrical installations, especially for internal power and lighting circuits. The maximum flexibility of the Flexpar 750 V line is the ideal solution for easy installation.

## Construction

**Conductor:** bare electrolytic copper wires, soft hardness, stringing of class 5, acc. to NM 280.

**Insulation:** thermoplastic compound of PVC/A.

**Available colors:** black, light blue, green, red, yellow, white, gray and yellow green.

## Maximum Operating Temperatures

In continuous regime: 70°C

In overload: 100°C

In short circuit: 160°C

## Reference Standards

ABNT NBR NM 247-3 - Insulated cables with polyvinyl chloride for nominal voltages up to 450/750 V, including - Part 3: Insulated conductors (without coverage) for fixed installations (IEC 60227-3, MOD).

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

For sections up to 10 mm<sup>2</sup>: conditioning in rolls of 100 m.

For sections from 16 mm<sup>2</sup>: conditioning in reels.

## Nominal Dimensions

Nominal Section (mm <sup>2</sup> )	Conductor Diameter (mm)	Insulation Thickness (mm)	External Diameter (mm)	Nominal Weight (kg/km)
0,5	0,91	0,6	2,2	8,3
0,75	1,12	0,6	2,4	10,9
1	1,29	0,6	2,5	13,4
1,5	1,51	0,7	3,0	19,0
2,5	1,96	0,8	3,7	29,9
4	2,48	0,8	4,2	43,7
6	3,03	0,8	4,7	61,2
10	3,99	1,0	6,1	104

50	8,86	1,4	11,9	465
70	10,60	1,4	13,7	641
95	12,15	1,6	15,7	846
120	13,95	1,6	17,5	1.066
150	16,10	1,8	20,1	1.336
185	17,20	2,0	21,6	1.620
240	20,20	2,2	25,1	2.145

INSULATED CONDUCTORS

# Toxfree Cable 750 V

## Application

The Conduspar Line of Toxfree Cables 750 V is the safest solution for electrical installations, as it has a low smoke emission in case of fire. The NBR 5410 recommends the use of halogen-free and low-smoke cables in installations with large concentrations of people and with long and tumultuous escape routes (BD2, BD3 and BD4).

## Construction

**Conductor:** bare electrolytic copper wires, soft hardness, stringing of class 5, acc. to NM 280.

**Insulation:** halogen-free polyolefin thermoplastic compound with fire retardant.

**Available colors:** black, light blue, green, red, yellow, white, gray and yellow green.

## Maximum Operating Temperatures

In continuous regime: 70°C

In overload: 100°C

In short circuit: 160°C

## Reference Standards

ABNT NBR 13248 - Power cables and insulated conductors without coverage, non-halogen and with low smoke emission, for voltages up to 1 kV - Performance requirements.

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

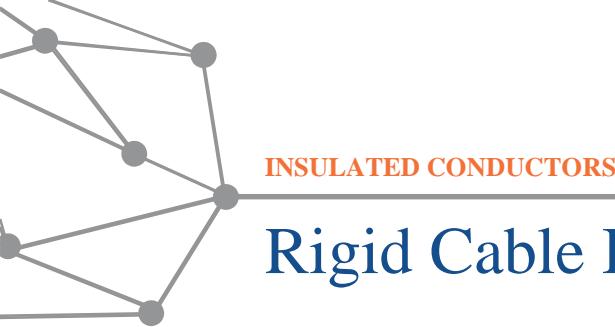

## Conditioning

For sections up to 10 mm<sup>2</sup>: conditioning in rolls of 100 m.

For sections from 16 mm<sup>2</sup>: conditioning in reels.

## Nominal Dimensions

Nominal Section (mm <sup>2</sup> )	Conductor Diameter (mm)	Insulation Thickness (mm)	External Diameter (mm)	Nominal Weight (kg/km)
1,5	1,51	0,7	3,0	18,6

185	17,20	2,0	21,6	1.588
240	20,20	2,2	25,1	2.102

INSULATED CONDUCTORS

# Rigid Cable BWF 750 V

## Application

The Conduspar Line of Rigid Cables BWF 750 V is suitable for common electrical installations. The rigid cables BWF 750 V have the characteristic of non-propagation of flame.

## Construction

**Conductor:** bare electrolytic copper wires, soft hardness, stringing of class 2, acc. to NM 280.

**Insulation:** thermoplastic compound of PVC/A.

**Available colors:** black, light blue, green, red, yellow, white, gray and yellow green.

## Maximum Operating Temperatures

In continuous regime: 70°C

In overload: 100°C

In short circuit: 160°C

## Reference Standards

ABNT NBR NM 247-3 - Insulated cables with polyvinyl chloride for nominal voltages up to 450/750 V, including - Part 3: Insulated conductors (without coverage) for fixed installations (IEC 60227-3, MOD).

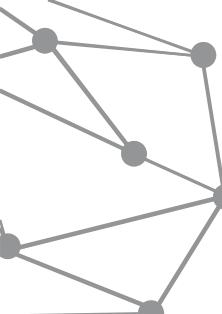

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

In reels.

## Nominal Dimensions

INSULATED CONDUCTORS

# Wire BWF 750 V

## Application

The Conduspar Line of Wires BWF 750 V is suitable for common electrical installations. The isolated wires BWF 750 V have the characteristic of non-propagation of flame.

## Construction

**Conductor:** bare electrolytic copper wires, soft hardness, class 1, acc. to NM 280.

**Insulation:** thermoplastic compound of PVC/A.

**Available colors:** black, light blue, green, red, yellow, white, gray and yellow green.

## Maximum Operating Temperatures

In continuous regime: 70°C

In overload: 100°C

In short circuit: 160°C

## Reference Standards

ABNT NBR NM 247-3 - Insulated cables with polyvinyl chloride for nominal voltages up to 450/750 V, including - Part 3: Insulated conductors (without coverage) for fixed installations (IEC 60227-3, MOD).

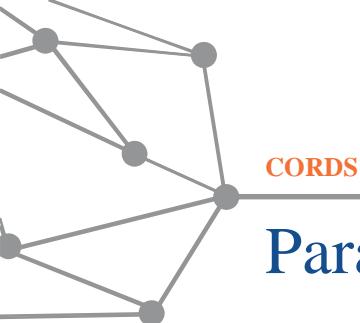

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

In reels with 100 m.

## Nominal Dimensions

Section (mm <sup>2</sup> )	Conductor Diameter (mm)	Insulation Thickness (mm)	External Diameter (mm)	Nominal Weight (kg/km)
1,5	1,38	0,7	2,8	19,9
2,5	1,76	0,8	3,4	30,9
4	2,22	0,8	3,9	45,4
6	2,72	0,8	4,4	64,0
10	3,52	1,0	5,6	106

CORDS

# Parallel 300 V

## Application

The Conduspar Line of Parallel 300 V is suitable for temporary connections, such as extension cords, lamp power and similar equipment.

## Construction

**Conductor:** bare electrolytic copper wire, soft hardness, class 1, acc. to NM 280.

**Insulation:** thermoplastic compound of PVC/D.

**Available colors:** white and brown.

## Maximum Operating Temperature

Continuous regime: 70°C

## Reference Standards

ABNT NBR NM 247-5 - Insulated cables with polyvinyl chloride for nominal voltages up to 450/750 V, including - Part 5: Flexibles cables (cords) (IEC 60227-5, MOD).

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

In rolls of 100 m or in reels.

## Nominal Dimensions

Section (mm <sup>2</sup> )	Conductor Diameter (mm)	Insulation Thickness (mm)	External Diameter (mm)	Nominal Weight (kg/km)
0,5	0,91	0,7	2,5 x 5,3	22,0
0,75	1,12	0,7	2,7 x 5,7	27,6
1	1,29	0,8	2,9 x 6,1	33,0
1,5	1,51	0,8	3,1 x 6,5	33,0
2,5	1,96	0,8	3,6 x 7,5	42,5
4	2,48	0,8	4,1 x 8,6	89,6

CORDS

# PP 500 V

## Application

The Condustron Line of PP 500 V is suitable for temporary connections, such as extension cords, equipment connection cords and lamp power.

## Construction

**Conductor:** bare electrolytic copper wires, flexible stringing class 5, acc. to NM 280.

**Insulation:** thermoplastic compound of PVC/D.

### Conductor colors:

2 conductors: black and light blue

3 conductors: black, light blue and brown

4 conductors: black, light blue, Brown and yellow green

Coverage: Flexible PVC-compound in black. Other colors on request.

## Maximum Operating Temperature

Continuous regime: 70°C

## Reference Standards

ABNT NBR NM 247-5 - Insulated cables with polyvinyl chloride for nominal voltages up to 450/750 V, including - Parte 5: Flexibles cables (cords) (IEC 60227-5, MOD).

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

In rolls of 100 m, limited to 40 kg or in reels.

# Welding Cable 750 V

## Application

The Conduspar Line of Welding Cables 750 V is suitable for connecting electrodes to arc welding machines. The construction of welding cables 750 V has flexibility and strength to ensure the ease operation and durability.

## Construction

**Conductor:** bare electrolytic copper wires, stringing flexible class 5, acc. to NM 280.

**Insulation:** thermoplastic compound of PVC flexible.

## Reference Standards

ABNT NBR 8762 - Extra flexible Cables for arc welding machines and other applications - Specification.  
ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

In rolls of 100 m, limited to 40 kg.

In reels, sold per meter.

## Nominal Dimensions

LOW VOLTAGE ENERGY

# Flex Cable HEPR 1 kV

## Application

The Conduspar Line of HEPR 1 kV is suitable for residential, commercial and industrial installations, as well as for low voltage power distribution. It has insulation in HEPR (ethylene propylene rubber), which allows maximum current capacity, for temperatures in the conductor up to 90°C.

## Construction

**Conductor:** bare electrolytic copper wires, soft hardness, stringing of class 5, acc. to NM 280.

**Insulation:** thermosetting compound of HEPR - ethylene propylene rubber.

**Conductor colors:** black, blue, white and red - in increasing order of conductor quantity.

**Coverage and fillings:** thermoplastic compound of PVC/ST2.

## Maximum Operating Temperatures

In continuous regime: 90°C

In overload: 130°C

In short circuit: 250°C

## Reference Standards

ABNT NBR 7286 - Power cables with extruded insulation of ethylene propylene rubber (EPR, HEPR or EPR 105) for voltages from 1 to 35 kV - Performance requirements.

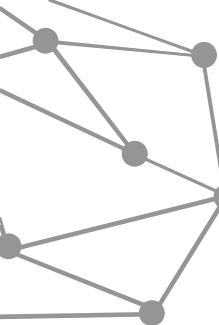

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

In reels.

LOW VOLTAGE ENERGY

# Toxfree Cable 1 kV

## Application

The Conduspar Line of Toxfree Cable 1 kV is the safest solution for electrical installations, as it has a low smoke emission in case of fire. The standard NBR 5410 recommends the use of halogen-free and low smoke emission cables in installations in large concentrations of people with long and tumultuous escape routes (BD2, BD3 and BD4).

## Construction

**Conductor:** bare electrolytic copper wires, soft hardness, stringing of class 5, acc. to NM 280.

**Insulation:** thermosetting compound of HEPR - ethylene propylene rubber.

**Conductor colors:** black, blue, white and red - in increasing order of conductor quantity.

**Coverage and fillings:** halogen-free polyolefin thermoplastic compound with fire retardant (SHF1).

## Maximum Operating Temperatures

In continuous regime: 90°C

In overload: 130°C

In short circuit: 250°C

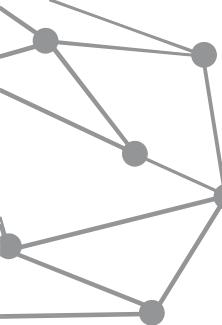

## Reference Standards

ABNT NBR 13248 - Power cables and insulated conductors without coverage, halogen-free and with low smoke emission, for voltages up to 1 kV - Performance requirements.

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

LOW VOLTAGE ENERGY

# Rigid Cable HEPR 1 kV

## Application

The Conduspar Line of Rigid Cables HEPR 1 kV is suitable for residential, commercial and industrial electric installations, as well as for low voltage power distribution.

## Construction

**Conductor:** bare electrolytic copper wires, soft hardness, stringing of class 2 compact, acc. to NM 280.

**Insulation:** thermosetting compound of HEPR - ethylene propylene rubber.

**Coverage and fillings:** thermoplastic compound of PVC/ST2.

## Reference Standards

ABNT NBR 7286 - Power cables with extruded insulation of ethylene propylene rubber (EPR, HEPR or EPR 105) for voltages from 1 to 35 kV - Performance requirements.

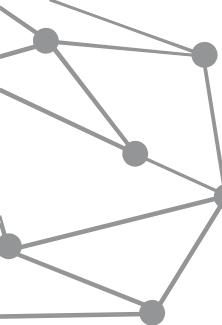

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

In reels.

LOW VOLTAGE ENERGY

# Flex Cable PVC 1 kV

## Application

The Conduspar Line of Flex Cables PVC 1 kV is suitable for residential, commercial and industrial electric installations, as well as for low voltage power distribution.

## Construction

**Conductor:** bare electrolytic copper wires, soft hardness, stringing of class 5, acc. to NM 280.

**Insulation:** thermoplastic compound of PVC/A, fire retardant.

**Conductor colors:** black, blue, white and red - in increasing order of conductor quantity.

**Coverage and fillings:** thermoplastic compound of PVC/ST1, fire retardant.

## Maximum Operating Temperatures

In continuous regime: 70°C

In overload: 100°C

In short circuit: 160°C

## Reference Standards

NBR 7288 - Power cables with extruded solid insulation of polyvinylchloride (PVC) or polyethylene (PE) for voltages from 1 to 6 kV.

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

LOW VOLTAGE ENERGY

# XLPE Cable 1 kV

## Application

The Conduspar Line of XLPE Cables 1 kV is suitable for underground energy distribution. Despite not having a cover layer, the XLPE insulation layer has sufficient thickness to impart electrical insulation, mechanical resistance and excellent tolerance to contact with humidity.

## Construction

**Conductor:** bare electrolytic copper wires, soft hardness, stringing of class 5, acc. to NM 280.

**Insulation:** thermoplastic compound of PVC/A, fire retardant.

**Conductor colors:** black, blue, white and red - in increasing order of conductor quantity.

**Coverage and fillings:** thermoplastic compound of PVC/ST1, fire retardant.

## Maximum Operating Temperatures

In continuous regime: 70°C

In overload: 100°C

In short circuit: 160°C

## Reference Standards

NBR 7288 - Power cables with extruded solid insulation of polyvinylchloride (PVC) or polyethylene (PE) for voltages of 1 a 6 kV.

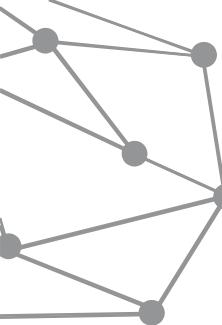

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

SPECIAL APPLICATIONS

# Control Cable

## Application

The Conduspar Line of Control Cables is suitable for command and control circuits.

## Construction

**Conductor:** bare electrolytic copper wires, soft hardness, stringing of class 5, acc. to NM 280.

**Insulation:** thermoplastic compound of PVC/A, fire retardant.

**Identification:** numbered black conductors.

**Separator:** polyester tape.

**Coverage and fillings:** thermoplastic compound of PVC/ST1, fire retardant.

## Maximum Operating Temperature

In continuous regime: 70°C

## Reference Standards

NBR 7289 - Control cables with insulation extruded in PE or PVC for voltages up to 1 kV - Performance requirements.  
ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

SPECIAL APPLICATIONS

# Shielded Control Cable

## Application

The Conduspar Line of Shielded Control Cables is suitable for command and control circuits, in locals with high electromagnetic interference, such as substations and industrial installations.

## Construction

**Conductor:** bare electrolytic copper wires, soft hardness, stringing of class 5, acc. to NM 280.

**Insulation:** thermoplastic compound of PVC/A, fire retardant.

**Identification:** numbered black conductors.

**Separator:** polyester tape.

**Metallic shielding:** bare copper tape, with minimal overlap of 10%.

**Coverage and fillings:** thermoplastic compound of PVC/ST1, fire retardant.

## Maximum Operating Temperature

In continuous regime: 70°C

## Reference Standards

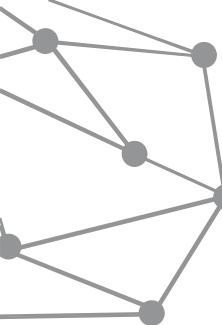

NBR 7289 - Control cables with insulation extruded in PE or PVC for voltages up to 1 kV - Performance requirements.  
ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

In reels.

SPECIAL APPLICATIONS

# Cable for Frequency Converter 1 kV

## Application

The Conduspar Line of Cables for Frequency Converter 1 kV is the ideal solution for connection and control of machines by frequency converters. This cable contains in its structure all the necessary components of the circuit: three phases, neutral conductor in concentric formation, with reduced section and the metallic shielding, to prevent the proliferation of noises in the adjacent circuits.

## Construction

**Conductor:** bare electrolytic copper wires, soft hardness, stringing of class 5, acc. to NM 280.

**Insulation:** thermosetting compound of HEPR - ethylene propylene rubber.

**Conductor colors:** black, blue, white and red - in increasing order of conductor quantity.

**Concentric conductor:** with electrolytic copper wires applied helicoidally, with section reduced by 50% from phase conductor, for sections greater than 16 mm<sup>2</sup>.

**Metallic shielding:** bare copper tape, with minimal overlap of 10%.

**Coverage and fillings:** thermoplastic compound of PVC/ST2.

## Maximum Operating Temperatures

In continuous regime: 90°C

In overload: 130°C

In short circuit: 250°C

## Reference Standards

ABNT NBR 7286 - Power cables with extruded insulation of ethylene propylene rubber (EPR) for voltages from 1 to 35 kV - Performance requirements.

ABNT NBR 6251 - Power cables with extruded insulation for voltages from 1 to 35 kV - Construction requirements.

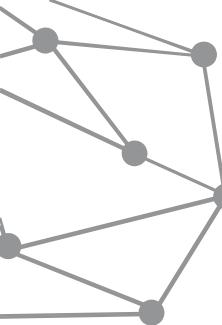

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

In reels.

SPECIAL APPLICATIONS

# Instrumentation Cable 300 V BC

## Application

The Conduspar Line of Instrumentation Cables 300 V BC is suitable for reading of analog signals from instruments of industrial applications and communication in special circuits. The collective shielding is a basic protection against external interference.

## Construction

**Conductor:** bare electrolytic copper wires, stringing of class 2, acc. to NM 280.

**Insulation:** thermoplastic compound of PVC/E, fire retardant.

**Identification:** 2 conductors in black and white; 3 conductors in black, white and red; numbered elements; separator in non-hygroscopic tape.

**Collective shielding:** aluminized polyester tape, with drain conductor in tinned copper of 0,5 mm<sup>2</sup>.

**Coverage:** thermoplastic compound of PVC/ST2, fire retardant.

## Maximum Operating Temperatures

Continuous regime: 105°C

## Reference Standards

ABNT NBR 10300 - Instrumentation cables with extruded insulation of PE or PVC for voltages up to 300 V - Performance requirements.

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

SPECIAL APPLICATIONS

# Instrumentation Cable 300 V BIC

## Application

The Condustron Line of Instrumentation Cables 300 V BIC is suitable for reading of analog signals from instruments of industrial applications and communication in special circuits. The individual and collective shielding set is a protection for 2 or 3 conductors against external interference and other signals into the cable.

## Construction

**Conductor:** bare electrolytic copper wires, stringing of class 2, acc. to NM 280.

**Insulation:** thermoplastic compound of PVC/E, fire retardant.

**Identification:** 2 conductors in black and white; 3 conductors in black, white and red; numbered elements; separator in non-hygroscopic tape.

**Individual shielding:** aluminized polyester tape, with minimal overlap of 25%, 100% of coverage and drain conductor in tinned copper of 0,5 mm<sup>2</sup>.

**Collective shielding:** aluminized polyester tape, with minimal overlap of 25%, 100% of coverage and drain conductor in tinned copper of 0,5 mm<sup>2</sup>.

**Coverage:** thermoplastic compound of PVC/ST2, fire retardant, in black.

## Maximum Operating Temperatures

Continuous regime: 105°C

# Cable MTS105

## Application

The Conduspar Line of Cables MTS105 is suitable for power distribution circuits in medium voltage up to 35 kV. MTS105 cables are the best solution for medium voltage connections of consumers with large size, condominiums and industries. The EPR105, insulating material used in the MTS105 line, brings together the maximum current capacity and the most optimized construction

## Construction

**Conductor:** bare electrolytic copper wires, soft hardness, stringing of class 2 compact, acc. to NM 280.

**Conductor shielding:** semiconductive thermosetting compound.

**Insulation:** thermosetting compound of EPR105 (ethylene propylene rubber), with coordinated, extruded and vulcanized thickness simultaneously with the semiconductive shieldings.

**Insulation shielding:** semiconductive thermosetting compound, with ease cold extraction.

**Metallic shielding:** bare copper wiring crown, effective section of 6,5 mm<sup>2</sup>.

**Coverage:** thermoplastic compound of PVC/ST2 in black.

## Voltage classes

3,6/6 kV, 6/10 kV, 8,7/15 kV, 12/20 kV, 15/25 kV and 20/35 kV

## Maximum Operating Temperatures

In continuous regime: 105°C

In overload: 140°C

In short circuit: 250°C

## Reference Standards

ABNT NBR 7286 - Power cables with extruded insulation of ethylene propylene rubber (EPR) for voltages from 1 to 35 kV - Performance requirements.

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

UNDERGROUND MEDIUM VOLTAGE

# Cable MT105

## Application

The Conduspar Line of Cables MT105 is suitable for power distribution circuits in medium voltage up to 35 kV with maximal current capacity provided by the insulation in EPR105.

## Construction

**Conductor:** bare electrolytic copper wires, soft hardness, stringing of class 2 compact, acc. to NM 280.

**Conductor shielding:** semiconductive thermosetting compound.

**Insulation:** thermosetting compound of XLPE (reticular polyethylene), with full, extruded and vulcanized thickness, simultaneously with the semiconductive shieldings.

**Insulation shielding:** semiconductive thermosetting compound, with ease cold extraction.

**Metallic shielding:** bare copper wiring crown, effective section of 6,5 mm<sup>2</sup>.

**Coverage:** thermoplastic compound of PVC/ST2 in black.

## Voltage classes

3,6/6 kV, 6/10 kV, 8,7/15 kV, 12/20 kV, 15/25 kV and 20/35 kV

## Maximum Operating Temperatures

In continuous regime: 90°C

In overload: 130°C

In short circuit: 250°C

## Reference Standards

ABNT NBR 7286 - Power cables with extruded insulation de ethylene propylene rubber (EPR) for voltages from 1 to 35 kV - Performance requirements.

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

UNDERGROUND MEDIUM VOLTAGE

# Cable MTS Toxfree

## Application

The Conduspar Line of Cables MTS Toxfree is suitable for energy distribution in medium voltage in locals of great people concentration, and with long escape and tumultuous routes. MTS Toxfree cables are halogen-free and have a low smoke emission in case of fire. In general, they are used in locals such as shopping centers, metropolitan transport stations and large buildings with a high flow of people.

## Construction

**Conductor:** bare electrolytic copper wires, soft hardness, stringing of class 2 compact, acc. to NM 280.

**Conductor shielding:** semiconductive thermosetting compound.

**Insulation:** thermosetting compound of HEPR (ethylene propylene rubber), with coordinated, extruded and vulcanized thickness simultaneously with the semiconductive shieldings.

**Insulation shielding:** semiconductive thermosetting compound, with ease cold extraction.

**Metallic shielding:** bare copper wiring crown, effective section of 6,5 mm<sup>2</sup>.

**Coverage:** halogen-free polyolefin thermoplastic compound with fire retardant (SHF1).

## Voltage classes

3,6/6 kV, 6/10 kV, 8,7/15 kV, 12/20 kV, 15/25 kV and 20/35 kV

## Maximum Operating Temperatures

In continuous regime: 90°C

In overload: 130°C

In short circuit: 250°C

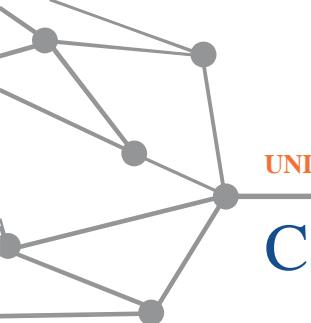

## Reference Standards

NBR 16132 - Power cables, halogen-free, with low smoke emission, insulated, with coverage, for voltages from 3 to 35 kV - Performance requirements.

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

In reels.

BARE CABLES

# Copper

## Application

Power distribution overhead lines with stringing of protection system against atmospheric discharges and grounding meshes.

## Construction

**Conductor:** bare electrolytic copper wires, semi-hard hardness, stringing class 2A and 3A.

## Voltage classes

3,6/6 kV, 6/10 kV, 8,7/15 kV, 12/20 kV, 15/25 kV and 20/35 kV

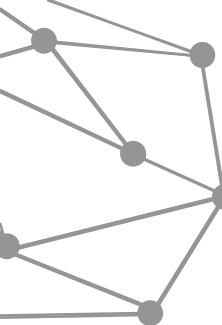

## Reference Standards

NBR 6524 - Hard and half-hard copper wires with or without protected coverage for overhead line installations.

## Nominal Dimensions

# Aluminum with Steel Core - CAA

## Application

Power distribution overhead lines and transmission lines.

## Construction

### Conductor

Aluminum wires 1350 and galvanized steel wires  
Zinc-plated steel wires

## Reference Standards

ABNT NBR 7270 - Bare aluminum cables with zinc-plated steel core for overhead lines - Specification.  
ASTM B232 - Concentric-Lay-Stranded Aluminum Conductors, Coated-Steel Reinforced (ACSR).

## Conditioning

In reels.

OVERHEAD LINES

# Multiplex Cable 1 kV

## Application

The Conduspar Line of Multiplex Cables 1 kV is suitable for secondary circuits of power distribution and consumer connection in low voltage.

## Construction

**Phase conductor:** Aluminum wires 1350, stringing class 2, compact, acc. to NM 280.

**Insulation:** thermosetting compound of XLPE (reticular polyethylene), weather resistant.

### Identificación:

1 phase: black

2 phases: black and gray

3 phases: black, grey and red

### Neutral conductor:

Aluminum CA: aluminum wires 1350, hardness H19, normal round stringing.

Alloy aluminum CAL: aluminum wires with alloy 6201, hardness T81, normal round stringing, acc. to 10298.

Neutral conductor insulation: if requested, in XLPE in light blue.

## Maximum Operating Temperatures

In continuous regime: 90°C

In overload: 130°C

In short circuit: 250°C

## Reference Standards

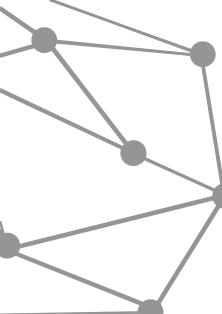

ABNT NBR 8182 - Self-sustained multiplex power cables with extruded insulation of PE or XLPE, for voltages up to 0,6/1 kV - Performance requirements.

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

ABNT NBR 10298 - Bare cables with alloy aluminum-magnesium-silicon, for overhead lines - Specification.

## Conditioning

In rolls of 100 m or reels, for section up to 25 mm<sup>2</sup>. For other constructions, in reels.

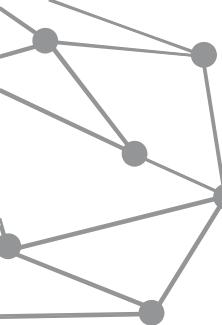

OVERHEAD LINES

# Protected Cable

## Application

The Condustrap Line of Protected Cables is suitable for compact primary networks of medium voltage power distribution. The protected cable coverage is resistant to electrical tracking and weather. This increases the reliability of the overhead line distribution, which prevents discharges and shutdowns, in occasional contacts with grounded objects and trees.

## Construction

**Conductor:** aluminum wire 1350, stringing class 2 compact, with longitudinal humidity locking, acc. to NM 280.

**Conductor shielding:** semiconductive thermosetting compound (including para cables de 35 kV, optional for cables of 15 and 25 kV).

**Coverage:** thermosetting compound of XLPE (reticular polyethylene), resistant to electrical tracking and weather, in gray.

## Maximum Operating Temperatures

In continuous regime: 90°C

In overload: 100°C

In short circuit: 250°C

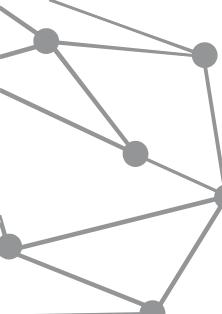

## Reference Standards

ABNT NBR 11873 - Cables covered with polymeric material for power distribution networks fixed in spacers, in voltages from 13,8 to 34,5 kV.

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

In reels.

OVERHEAD LINES

# Cable MTX-RA 15 kV

## Application

The Conduspar Line of Cables MTX-RA 15 kV is the most robust solution for an overhead distribution line with medium voltage. Self-sustaining multiplex insulated cables eliminate the risk of discharging and switching off due to contacts with the medium voltage overhead line. They are indicated for crossings of routes with high traffic, networks near to buildings, or simply in the use of the same high tension network with several nearby circuits.

## Construction

**Phase conductor:** aluminum wires 1350, stringing class 2, compact, with longitudinal humidity locking, acc. to NM 280.

**Conductor shielding:** semiconductive thermosetting compound.

**Insulation:** thermosetting compound of XLPE (reticular polyethylene), with coordinated, extruded and vulcanized thickness simultaneously with the semiconductive layers.

**Insulation shielding:** semiconductive thermosetting compound with ease cold extraction.

**Metallic shielding:** bare copper wiring crown, effective section of 6,5 mm<sup>2</sup>.

**Coverage:** thermoplastic compound of PE/ST7, resistant to weather, in black.

**Neutral for support:** aluminum cable with alloy 6201, acc. to 10298.

## Maximum Operating Temperatures

In continuous regime: 90°C

In overload: 130°C

In short circuit: 250°C

## Reference Standards

ABNT NBR 9024 - Self-sustaining multiplex insulated cables with extruded insulation of XLPE for voltages from 10 to 35 kV with coverage - Performance requirements.

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

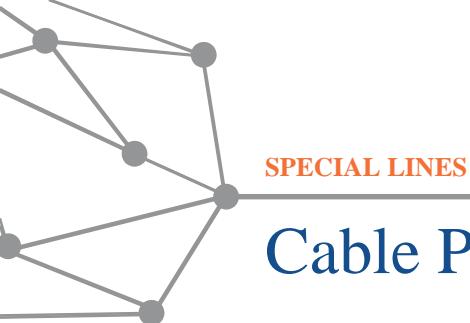

ABNT NBR 10298 - Bare cables with alloy aluminum-magnesium-silicon, for overhead lines - Specification.

## Conditioning

In reels.

SPECIAL LINES

# Cable PROSOLAR FV

## Application

The Conduspar Line of Cables PROSOLAR FV is suitable for connections of photovoltaic panels. The reliability in photovoltaic systems demands resistance to high levels of UV radiation, workability in extreme temperature ranges and halogen-free materials to prevent the emission of corrosive smoke in case of fire. In addition to all these requirements, the cables PROSOLAR FV have excellent flexibility to facilitate handling during installation. These characteristics make the cables PROSOLAR FV able to operate for at least 25 years.

## Construction

**Conductor:** tinned electrolytic copper wires, flexible stringing class 5, acc. to NM 280.

**Insulation:** halogen-free polyolefin thermoplastic compound

**Insulation:** halogen-free polyolefin thermoplastic compound with fire retardant, resistant to UV radiation and weather.

**Colors:** black, blue and red - other colors on request.

## Operation Conditions

Insulation voltage in direct current: 1,8 kV (among conductors - systems without grounding)

Insulation voltage in alternating current: 0,6/1 kV

Room temperature: - 40°C to + 90°C

## Maximum Operating Temperatures

In continuous regime: 90°C or 120°C for up to 20.000 hours

In short circuit: 250°C

## Reference Standards

TÜV 2 PFG 1169 - Requirements for cables for use in photovoltaic-systems.

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

In rolls of 100 m or reels.

## Nominal Dimensions

Code	Conductor		Cable		Coverage		Nominal Weight (kg/km)	Minimum ray of Curvature (mm)
	Section (mm <sup>2</sup> )	Diameter (mm)	Diameter (mm)	Thickness (mm)	Diameter (mm)			
17585	4	2,47	0,7	0,9	5,8	59,3	29	
17586	6	3,02	0,7	1	6,5	78,6	33	
17587	10	3,99	0,7	1	7,5	122	38	

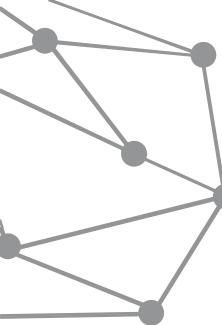

## Electric Parameters

Section (mm <sup>2</sup> )	Resistance in CC ( /km)			Current Capacity		
	20°C	90°C	120°C	Outdoor	In Ducts	Buried Ducts
4	5,09	6,49	7,09	48	42	44

10	1,95	2,49	2,72	88	75	73

## Correction Factors of Current Capacity

Temperature (°C)	10	15	20	25	30	35	40	45	50	55	60
Air	1,15	1,12	1,08	1,04	1	0,96	0,91	0,87	0,82	0,76	0,71
Floor	1,07	1,04	1	0,96	0,93	0,89	0,85	0,8	0,76	0,71	0,65

**Considerations:** Current capacities for maximum conductor temperature of 90°C. Air temperature 30°C / floor 20°C

SPECIAL LINES

## MTX GRID

## MT S105 GRID

When considering the reliability requirement of the underground power distribution networks and the renewable generation plants, Conduspar developed the GRID line.

The underground distribution circuits are mainly subject to permanent contact with humidity, or even total submersion. The humidity can be extremely harmful to insulating materials in medium voltage, with reduced life expectancy and circuits subject to unexpected faults.

To increase the reliability of these medium voltage circuits, the Conduspar GRID line has protection structures against the penetration of humidity inside the cables, and a cover in highly resistant material to abrasion and humidity absorption.

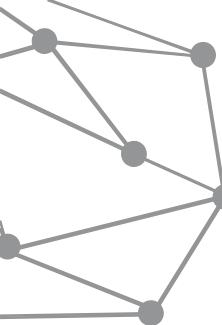

The MTX GRID and MTS105 GRID lines feature unique construction features, which protect cables from permanent contact with humidity in directly buried installations.

**The constructive advantages of Conduspar MT GRID cables are:**

- Aluminum conductors blocked against longitudinal penetration of humidity.
- Metallic shielding with specific sections for short circuit characteristics of the system and blocking of longitudinal penetration of humidity.
- Coverage in high density polyethylene (PE/ST7) resistant to abrasion and contact with humidity.
- MT GRID cable lines are available for voltage classes from 8,7/15 to 20/35 kV.

The main difference of application between the MTX GRID and MTS105 GRID lines is the current carrying capacity. The MTX line is insulated in XLPE, for temperatures in the conductor up to 90°C and the line MTS105 is isolated in EPR, for temperatures up to 105°C in the conductor. The insulation in EPR105 allows about 10% more current capacity.

SPECIAL LINES

# Cable MTX GRID 35 kV

The version of the GRID line isolated in XLPE for voltages up to 35 kV. The XLPE is the material traditionally used as an insulation for medium voltage cables in large distribution lines and power generation networks.

## Construction

**Phase conductor:** aluminum wires 1350, stringing class 2, compact, with longitudinal humidity locking, acc. to NM 280.  
**Conductor shielding:** semiconductive thermosetting compound.

**Insulation:** thermosetting compound of XLPE (reticular polyethylene), with coordinated, extruded and vulcanized thickness simultaneously with the semiconductive layers.

**Insulation shielding:** semiconductive thermosetting compound with ease cold extraction.

**Metallic shielding:** bare copper wiring crown, effective section of 6,5 mm<sup>2</sup>, with longitudinal humidity locking (other sections on request).

**Coverage:** thermoplastic compound of PE/ST7, indicated for permanent contact with humidity and directly buried installations, in black.

## Maximum Operating Temperatures

In continuous regime: 90°C

In overload: 130°C

In short circuit: 250°C

## Reference Standards

NBR 7287 - Power cables with solid extruded insulation of reticular polyethylene (XLPE) for insulation voltages from 1 to 35 kV - Performance requirements.

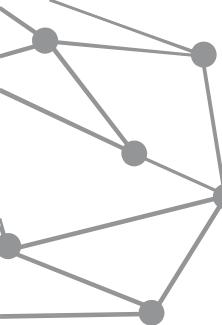

ABNT NBR NM 280 - Conductors of insulated cables (IEC 60228, MOD).

## Conditioning

In reels.

SPECIAL LINES

# Aluminum Cable with Core in Composite ACCC

## Application

For many years, steel cables reinforced with steel stinging have been used to increase mechanical strength, and reduce the arrow due to the thermal effect on power transmission lines.

Once the demand for electrical energy is increasing, there is a need to build new transmission lines. However, the approval of new transmission line projects runs into environmental and privately owned difficulties. In this context, increasing the capacity of existing lines becomes increasingly important.

New conductor types were introduced to the market, with focus on increasing capacity, to work in higher temperatures. Some aluminum alloys, already widely used, confer greater mechanical resistance and reduce the arrows. But, both higher temperatures and aluminum alloys are associated with increased energy losses.

Conduspar, in partnership with CTC Global, brought to Brazil the aluminum cable line with ACCC® carbon core. The proposal for ACCC® cables to the market is to increase the capacity of the lines, even by providing a substantial reduction in the arrows compared to other types of conductors.

When compared to aluminum cables with a CAA steel core of the same diameter, an ACCC® cable can contain more aluminum mass up to 28%, even with a reduction in total weight. The aluminum used in the construction of ACCC® cables is type 1350-O annealed. The superior conductivity of this type of aluminum (63% IACS) allows to operate with more efficiency than any other cable type available in the market.

The core of ACCC® cables consists of a composite of carbon fiber, glass fiber and epoxy resin for high temperature. A high-grade glass fiber layer involves the core to add flexibility, strength and even prevent galvanic corrosion between carbon fiber and aluminum filaments. The carbon core has higher tensile strength and lower coefficient of thermal expansion on the market.

## Construction

**Conductor:** trapezoidal aluminum wires, type 1350 annealed, hardness O.

**Core:** composite of carbon fiber and glass fiber, involved by epoxy resin resistant to heat.

## Maximum Operating Temperatures

In continuous regime: 180°C

In emergency/overload: 200°C

## Reference Standards

The requirements of the ACCC® cables are partially based on the standards:

ASTM B857 - Standard Specification for Shaped Wire Compact Concentric-Lay-Stranded Aluminum Conductors, Coated-Steel Supported (ACSS/TW).

ASTM B609 - Standard Specification for Aluminum 1350 Round Wire, Annealed and Intermediate Tempers, for Electrical Purposes.

EN 50540 - Conductors of Overhead Lines - Aluminum Conductors Steel Supported (ACSS).
